TOPICS FOR THIS WORKSHOP

Developing Successful eID Schemes: The Practical Guide

The solutions providers are the third group of key stakeholders in the identity space.

In this session, 6 leading identity solutions providers discuss the latest technology developments in identity systems and how they can support the next generation of foundational national identity schemes

PROVIDING A UNIQUE ID TO ITS CITIZENS IS

- In-line with the UN 2030 Agenda and specifically SDG 16.9

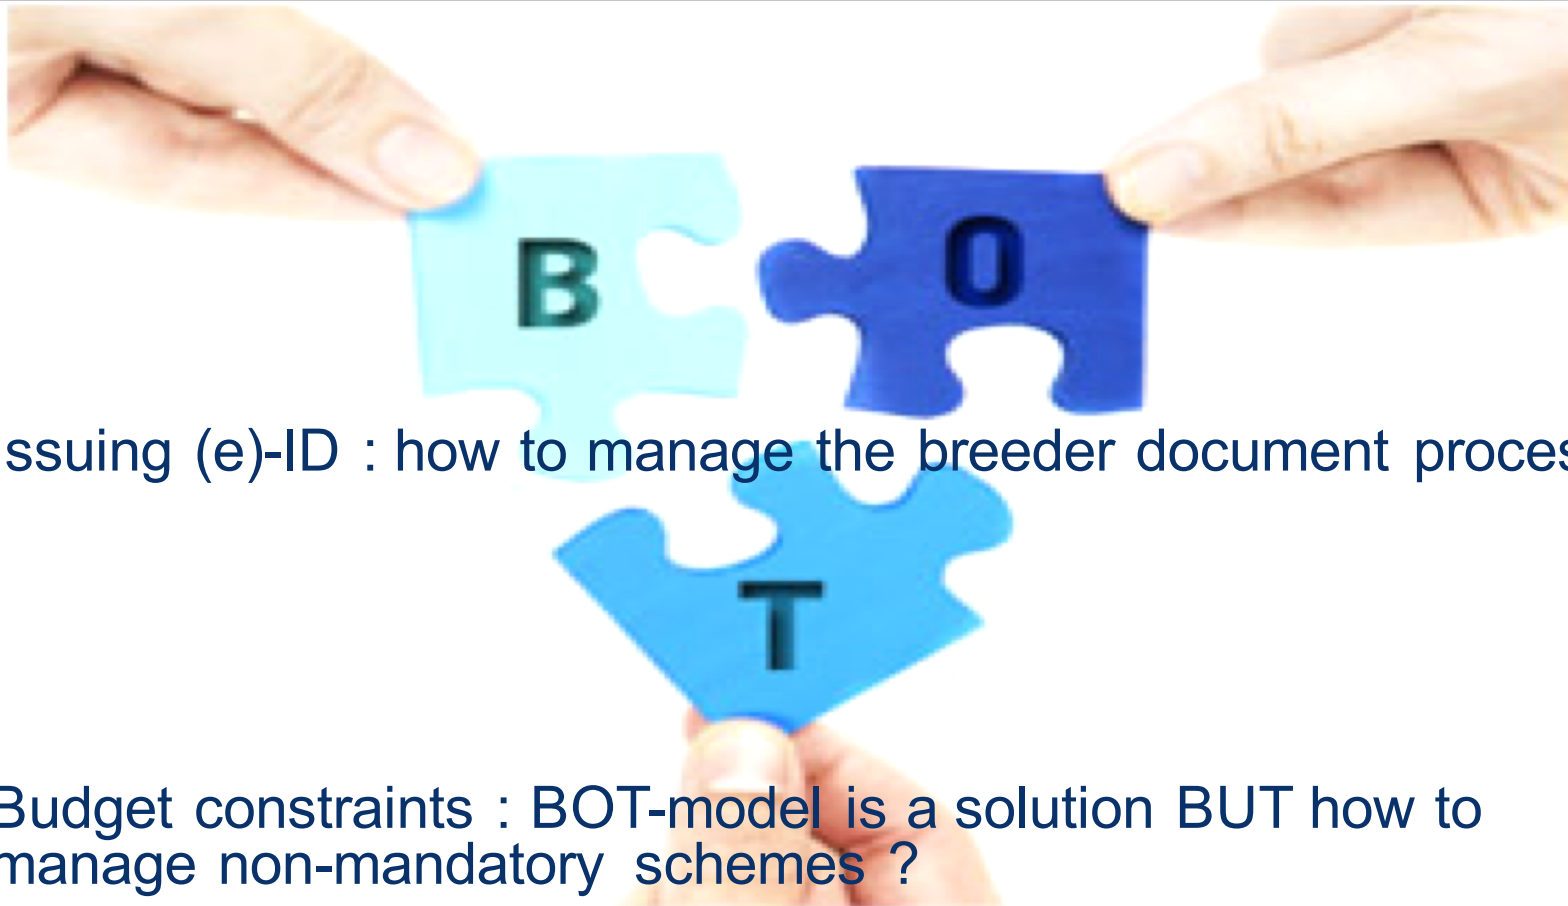

- The basis for societies to further develop itself
- The cornerstone to move to fair and transparent elections and democracy
- Fundamental to build the Civil Register, unique authentic source to correct service provisioning to your citizens
- A key building block (the 'e-factor' included) to move to digital services delivery

WHAT DO WE SEE TODAY

- Very old “worn-out” ID papers
- Little interest from the citizens to get a new ID
- “Overselling” by some technology providers
- Non-mandatory schemes
- Lacking a unique citizen number and/or central civil register
- Untrustable breeder document issuing
- No or incorrect use of biometrics

SOME OF THE KEY CHALLENGES

- Demographic explosion -> the Population Register need becomes even more urgent BUT makes the creation of one more difficult

- Issuing (e)-ID : how to manage the breeder document process ?
- Budget constraints : BOT-model is a solution BUT how to manage non-mandatory schemes ?

SOME OF THE KEY CHALLENGES - CTD

- Overselling by private sector : what value can a chip offer for a non-travel document if no reading devices deployed ?
- Universal in-country service delivery : everybody who is entitled should be able to get an affordable ID and benefit of the services → Logistics !
- “Tenderitis” : who doesn’t know an example of tenders being canceled several times or attacked in court ?

POLITICS

Civil Register

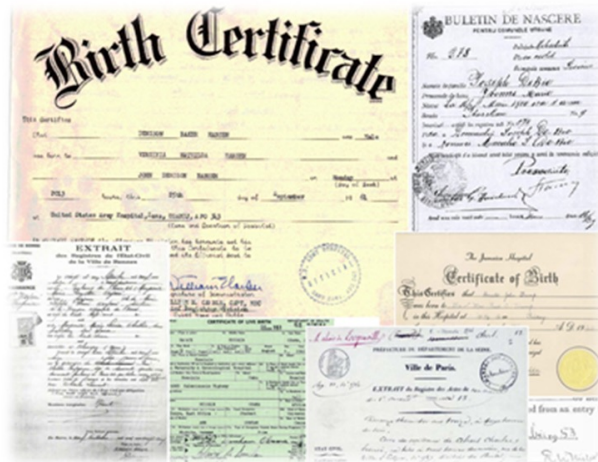

TECHNOLOGY IS NOT THE ISSUE ANYMORE

SOME NEWS FROM THE TECH FRONT

The real innovations in the African ID space

- More and more focus on process & security of breeder documents

- Better use of biometrics / arrival of iris in civil environments (eg EBODAC)

SOME NEWS FROM THE TECH FRONT

The real innovations in the African ID space - ctd

- The conviction that a Population Register is the key starting point to capture population dynamics and identity
- Investment in data network coverage for the whole country

SOME NEWS FROM THE TECH FRONT

The real innovations in the African ID space - ctd

- Convergence with payment (ie MasterCard initiatives)

- Mobility (attention : don't think we all have smartphones here ...)
 - Real reuse of mobile biometric kits -> Civil Register ('état civil')
 - Mobile terminals / tablets / phones for verification & control purposes
