

Powering the trusted identities of  
the world's people, places & things

# Mobile ID

Reducing the risk and keeping identity on track

# Remote and up to date

## Remote Issuance

Mobile IDs can be issued remotely to anyone who is already enrolled in a scheme

## Biometric Access

Biometrics can be used to verify and secure identity

## Always up to date

Identities can be updated whenever the user is connected

## Ownership

Identity resides with the citizen - on their mobile phone

# At a distance

## Contactless identification

Citizen share their identity without contact thanks to BLE technology

## Two layers of security

Secure verification plus visual check

# Its not a dream

The same technology could enable “immunity passports”

## Argentina did it

More than 200k national ID's issued despite launching just before the pandemic

## Mobile ID's surged

Huge mobile ID's issuance surge when physical issuance had ceased

## Thanks to legal equality

Mobile Identity has the same legal value as physical ID

# Summary

Get your mobile ID at home

Share your ID from a socially distanced 2M

Always up to date

Minimize your touch points
